Maximum Marks	5 Marks

Coding & Solution

The Coding & Solution phase represents the successful implementation of the Smart Lender – Loan Approval Prediction System. The project was developed using Python, Flask, and machine learning techniques to provide an intelligent loan eligibility prediction system. A trained Random Forest model was integrated with a user-friendly web application, enabling users to enter applicant details and receive instant loan approval predictions. The source code follows a structured and modular design with meaningful naming conventions, making it easy to understand, maintain, and extend. The application was tested to ensure reliable performance and was successfully deployed on the Render cloud platform, making it accessible through a web browser.

The implemented solution focuses on providing a simple, efficient, and reliable platform for preliminary loan eligibility assessment. The application accepts applicant details through an interactive web interface, processes the information using the trained machine learning model, and instantly displays the prediction result. Throughout development, emphasis was placed on code quality, modular implementation, and maintainability to ensure the system can be easily updated and enhanced in the future. The final solution demonstrates the practical use of machine learning in supporting faster and more consistent loan approval decisions.

The system has been designed to deliver accurate predictions while maintaining simplicity and ease of use for end users. It efficiently processes applicant information, evaluates key financial attributes, and generates reliable loan approval predictions within a short response time. The application also demonstrates the effective integration of machine learning with web technologies, creating a practical solution for real-world financial applications.

Solution Summary :

Field	Details
Repository Link / URL	https://github.com/sivasankarpilli/smart-lender-loan-prediction.git
Programming Language(s)	Python, HTML, CSS
Framework(s) Used	Flask, Scikit-learn
Key Features Implemented	Loan approval prediction, Random Forest model, Flask web application, Responsive UI, Cloud deployment
Pending / Incomplete Features	None
Setup / Run Instructions	Install dependencies, run app.py,

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes

5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project follows clean coding practices with a modular structure, readable code.
The application has been tested and produces accurate loan prediction results.
